

AGC Glass Hungary Kft. Energy policy

The management of AGC Glass Hungary Kft. declares its commitment to reducing unjustified energy use, increasing the efficiency of energy use and, as part of our social responsibility, to meet the requirements of the relevant EU directives at a high level, without any problems, and to maintain and continuously develop a modern, integrated energy management system. Our primary goal is to maintain the trust of our customers, maintain the good reputation of AGC Glass Hungary Kft., and secure and improve our market position by operating an efficient energy management system.

In order to do this:

- we intend to comply with all relevant legal requirements related to energy management and our other obligations;
- we continuously improve our energy management performance indicators and our energy management system;
- we ensure the availability of information and resources to achieve our energy management goals;
- we incorporate energy efficiency as a key element in our procurement, renovation and new construction plans;
- by increasing our employees' sense of responsibility for energy efficiency, we strive to prevent environmental pollution and reduce environmental impact and energy consumption;
- we encourage our employees to contribute creatively to the realization of company goals and the development of the effectiveness of processes;

The energy policy is an equal and coordinated part of the general policy and strategy of AGC Glass Hungary Kft.
